

THERMOVEGA 1/1 C10

Air temperature curve

The graph shows the temperature trend during the use of the hot cabinet

1. After 30 minutes from the start, the air inside the hot cabinet reaches the maximum temperature of 75°C and the thermostat automatically stops heating.
2. After stop heating the inside temperature will increase up to about 5°C (according to the situation, to the quantity of product inside the appliance, etc...). This is not a defect but the result of the double insulated walls effect which retain the heat for a long time even
3. After 20 minutes from the heating resistance switch-off, the internal temperature will gradually drop to reach 73°C.
